

MAGNUM

THE **ULTIMATE** TOUGH CRUSHING SOLUTIONS

IROCK's Magnum processes materials at rates of 350 to 650 TPH. The primary crusher uses an on-board power source to run the entire crushing operation, and its self-leveling system makes set-up fast and easy. The Magnum is available in three sizes and can handle quarry rock, demolition debris and recyclable material.

MAGNUM

FEATURES

- ▶ The Magnum's on-board power source runs the complete operation as well as three auxiliary outlets.
- ▶ The optional, patented Hydraset Hopper™ simplifies the connection and removal of the hopper/feeder. An internal power pack allows just one operator to attach and detach the unit for transportation in minutes.
- ▶ Standard hydraulic outriggers make for quick machine setup.
- ▶ The optional in-line discharge belt features a heightened discharge point that reaches 10 feet, 11 inches for higher stockpiling.
